RESEARCH AND EDUCATIONAL USE ONLY — NOT A MEDICAL DEVICE

Pharmacogenomic analysis summary

sample	DEMO_NORMAL
analysed	2026-11-06T01:12:38.621025Z
printed	2026-11-06
drugs checked	1

This is not a clinical report. It was produced by a final-year student project for research and education. It has not been clinically validated, and no qualified clinical expert has reviewed the explanatory text on this page.

Recommendation text on this page is quoted from published CPIC guidance via PharmCAT. Automated source checks are not human review: they cannot show that every statement here is supported, or that any of it is correct for the person this sample came from.

Do not change a medicine on the strength of this page. Take it to a qualified healthcare professional.

Results

Ordered by consequence, not alphabetically.

simvastatin — No PGx-guided adjustment identified

gene	SLCO1B1
diplotype	*1/*1
phenotype	NM
evidence level	Unknown

simvastatin: SLCO1B1 *1/*1 (Normal Function) — No PGx-guided adjustment identified.

CPIC GUIDELINE — QUOTED EXACTLY

Prescribe desired starting dose and adjust doses based on disease-specific guidelines.

CPIC strength of recommendation: Strong. Population: general. Implications: SLCO1B1: Typical myopathy risk and statin exposure

— Annotation of CPIC Guideline for simvastatin and SLCO1B1 (via PharmCAT) [label rule: standard_dosing]

Unknown results

None — every drug checked returned a result.

Input coverage

How many of the positions each gene needs carried a usable genotype in the uploaded file. A genotype caller reads an absent position as matching the reference, so missing data can produce confident results rather than uncertain ones — which is why the count is printed whether or not it passed, and why a gene below its minimum is reported as Unknown.

gene	usable	required	minimum	sufficient
CYP2C19	35	35	100%	yes
CYP2C9	88	88	100%	yes

CYP2D6	157	157	100%	yes
CYP4F2	0	20	100%	NO
DPYD	83	83	20%	yes
NUDT15	20	20	80%	yes
SLCO1B1	35	35	100%	yes
TPMT	45	45	80%	yes
VKORC1	0	1	100%	NO

Not resolved from this file: CYP4F2, VKORC1. Any drug keyed to these genes was reported as Unknown rather than assumed normal.

source	CPIC guidelines, retrieved via PharmCAT

Guidance reflects what CPIC published when this data was captured. CPIC revises its guidelines. A weekly repository check compares this build's CPIC data with CPIC's current release and flags differences for review; an analysis does not check at the time it runs.
